# Some Items of Interest(?)

Richard Horne

DCMC Group Leaders Workshop

# Topics

- One Book Stuff
  - Early CAS
  - Training Matrices
  - IT Responsibility
  - PLAS Tests
- Service Sets
- More One Book Stuff

# Early CAS

- Is not just for Early CAS POCs anymore (pretty soon)

- *Yesterday* - Look!  It's an Acquisition Strategy/RFP Development opportunity - Go get'em tiger and good luck.

- *Tomorrow* - How to identify early CAS opportunities, what they are, who is responsible for them, what to do to affect early CAS, where to go, who to talk to, etc.

- Part of every applicable operational One Book chapter - a natural evolution

# Early CAS - One Book Standards

4. The process and who is responsible.
Essential elements include:
A. Process inputs - what feeds the front end of the process - e.g., we take a request for information and turn it into a report that... Inputs are consumed, or transformed, by the process. `

**"Early" [name of process] Actions - [A general description of why getting involved "early" will help facilitate the execution of this process and/or specific process tasks.]  The what, when, and where of each beneficial early CAS type activity are listed below:**

**a.  What is the action, When does it occur, Where would that occurance take place**

**b.**

**c.**

# Training Matrices

- A tool/resource for each employee and supervisor
  - Process
  - Tasks for each Process (same as tasks in One Book)
  - KSAs for each Task
  - Interventions for each KSA
- On the street for your comment
- 30 Jun 00 is a good guess for completion of all and issuance of the *Training Management* and *Certifications* One Book chapters

# IT Responsibility

- Mission applications - e.g., MOCAS, SPS, AMS, ALERTS, ACTS, SIS, etc. etc.

- What are these?  The most important "enabling" device in our bag of tools, techniques, aids, etc.

- Who is responsible?  That is the question.
  - No One Book coverage to date
  - No one but the process manager/owner can be
  - But he/she can't do it all by themselves

- Build a team comprised of the process manager, a system administrator (FASST), and the IT project manager and list them where we now show the process owners and champions
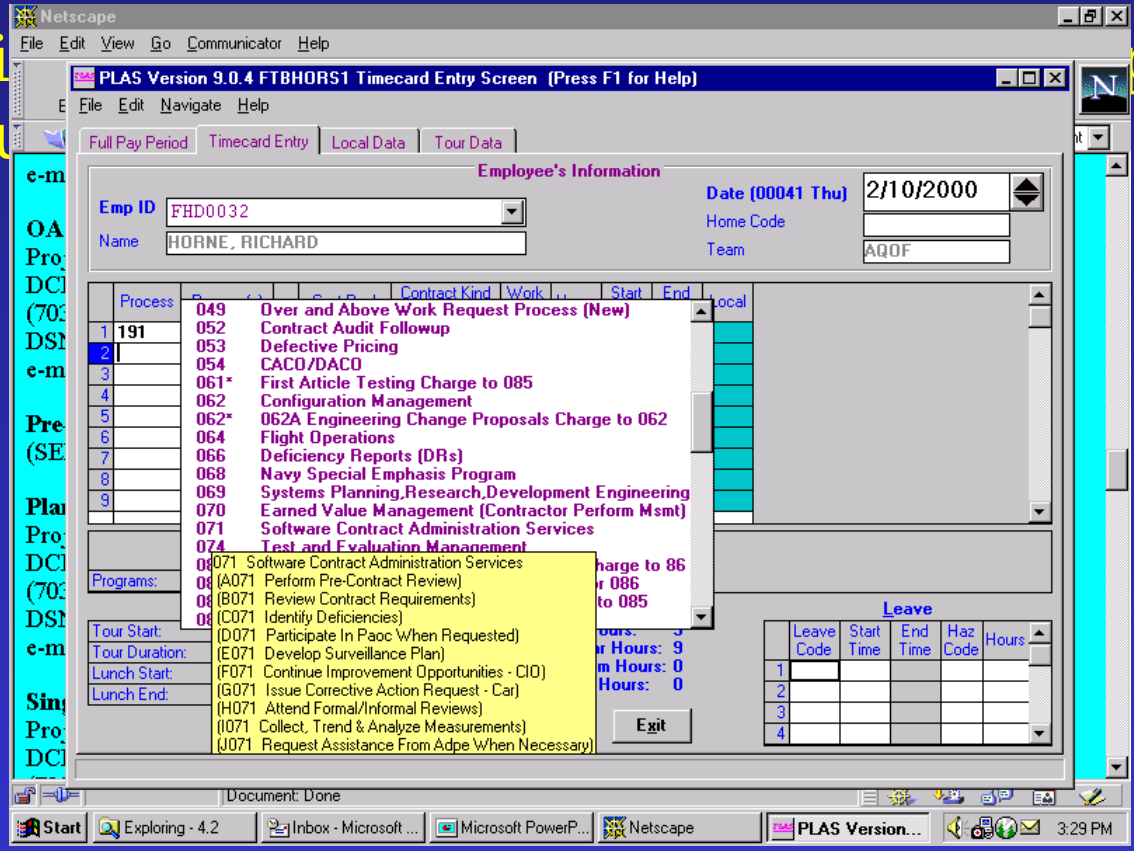

# PLAS Tests

- I thought it already worked - what tests?
- We are now really ready for ABC (PLAS 9.0.4)
  - Envi...........................................ponent featu...

# PLAS Tests

- Essential Elements of Information - uses UCA pricing task as an example:
  - **Task:  Delegate authority to ACO to: 1) definitize PCO issued undefinitized contract actions, or 2) to issue and definitize undefinitized contract actions (includes partial funding)**
    - *Who* **is responsible to complete the step: PCO**
    - *Product***: Letter of Delegation and/or undefinitized contract action (on those PCO issued actions)**
    - **Who** *records action* **that completes the step: ACO**
    - *Where* **is the step completion** *recorded***: Contract file and/or AMS**

# Service Sets

# Service Sets - Any questions?

# More One Book Stuff

One Book administration goes to Business Operations (DCMC-B)
